

We're happy you are interested in joining the Gigital team! Before we move forward we would like to see a sample of your code, so we have a small challenge for you.

Using Angular, your challenge is to build a list view of artists supplied from a sample API available at <https://gigital-code-sample-api.herokuapp.com>. If you are comfortable with graphql, navigate to **/graphql** (which is also the graphql endpoint) for a playground with docs. Otherwise the data is available at GET **/artists/list**.

What we expect to see

- A grid or list view of the artists from the API
- To be able to sort/filter the artists (for example price high to low)
- A nice presentation of the artists' data
- Nothing production ready :-)

Example of api response

```
[
  {
    "id": 1,
    "name": "Darin",
    "picture":
    "https://res.cloudinary.com/hthruuqgk/image/upload/c_crop,dpr_auto,f_auto,g_face,h_1000,q_
    _auto,w_1000/v1614350411/sample/Darin_Zanyar_in_2020__cropped_vh1qnm.jpg",
    "price": 15000,
    "tags": [
      {
        "id": 0,
        "group": 0,
        "name": "Artist"
      },
      {
        "id": 0,
        "group": 1,
        "name": "Pop"
      },
      {
        "id": 1,
        "group": 1,
        "name": "Ballad"
      }
    ],
    "video": "https://www.youtube.com/watch?v=JtwTFV-yFcs"
  }
